

# POLYSTICK® IR-Xe

## SELF-ADHERED ICE AND WATER PROTECTION UNDERLAYMENT

### PRODUCT DESCRIPTION

Polystick IR-Xe, is a homogeneous rubberized asphalt waterproofing compound, fiberglass reinforced, with an aggregate surface for skid resistance for use in ice and water protection applications. The rubberized asphalt seals around correctly installed nails on the weathering surface. Split release backing film aids in easy positioning of sheets to maintain proper line.

Polystick IR-Xe underlayments are manufactured using patented ADESO® dual compound Self-Adhesive technology, whereby a "true" polymer modified asphalt compound is applied on the top layer and an aggressive self-adhesive compound is applied on the bottom layer.

### USES

- Specially designed for multiple steep slope applications
- Designed as effective reinforcement for perimeter and flashing details
- Added protection against areas prone to wind driven rain and ice damming

### FEATURES AND BENEFITS

- Proprietary asphalt compound and fiberglass mat for exceptional dimensional stability
- Surface engineered for superior slip resistance and long term performance
- Aggressive self adhesive compound for ease of application

## SELF-ADHERED ICE AND WATER PROTECTION UNDERLAYMENT

### APPLICATION INSTRUCTIONS

- Apply Polystick IR-Xe directly to the roof deck.
- Do not apply to shingles or other roof coverings.
- Apply only when the weather is dry and material interface temperatures (air, roof deck, membrane) are 40°F and rising.
- Always start at the lowest point of the roof deck where possible.
- Cut the Polystick IR-Xe to a suitable, workable length prior to placement.
- Lay the material flat in place, starting at the lowest point.
- Overlap seams 3" minimum and endlaps 6" minimum.
- Peel half of the backing off the roll and apply firm, even pressure from the center to the outer edges.
- Remove the backing from the remaining half of the roll and apply pressure.
- Always ensure that Polystick IR-Xe is applied over the area to cover the highest point of "ice damming".
- Be sure to follow all local building code recommendations and requirements with regards to the width of ice dam materials.
- If full roof coverage application is desired, proper venting of the structure is required.
- Consult a design professional for proper venting requirements.
- In steep slope applications (i.e. 3:12 slope or higher) where backnailing will be required, be sure that all nails are covered by the overlapping next sheet.
- Polystick IR-Xe must be covered within 30 days of installation unless otherwise limited by local authorities.
